

University of Vermont Medical Center

Environmental Services

#Hiring2DayVT

ABOUT

Environmental Services serves as the foundation of patient care for the Medical Center. Environmental Services maintains the physical appearance of the hospital, like cleaning the halls we walk in and the rooms our patients stay. In addition, their work is the first thing our patients see. Environmental Service workers are a valued part of the Medical Center community. Most Environmental Services jobs are cleaning in certain areas of the hospital, handling non-hazardous waste, and handling hard floor and carpet procedures.

A high school diploma or equivalent is preferred for this job. New hires are expected to complete the Orientation Training Program within three months of their hire date. It is required that every employee can meet the physical demands of the job. It is desirable for our new hires to have experience in the health care industry, though not required.

EMPLOYMENT OPPORTUNITIES

[Environmental Service Worker II and III \(R0024620\)](#)
